**MAJOR MODIFICATION FORM
FOR LARGE CONSTRUCTION GENERAL PERMIT**
Coverage No. MSR10 7 7 1 7 County Lafayette

INSTRUCTIONS

Coverage recipients shall notify the Mississippi Department of Environmental Quality at least 30 days in advance of the following activities (check all that apply). This form should be submitted with a modified Storm Water Pollution Prevention Plan (SWPPP), updated USGS topographic map, Corps of Engineers Section 404 documentation and wastewater collection and treatment information, as appropriate.

- ☒ SWPPP details have been developed and are ready for MDEQ review for subsequent phases of an existing, covered project.
- ☒ "Footprint" identified in the original LCNOI is proposed to be enlarged.

This form must be signed by the current coverage recipient under Mississippi's Large Construction General Permit. A different developer of new phases of existing subdivisions must apply for separate permit coverage through the submittal of a new complete LCNOI package. Coverage recipients are authorized to discharge storm water associated with proposed expansions of existing subdivisions or subsequent phases, under the conditions of the General Permit, only upon receipt of written notification of approval by MDEQ. All other modifications, such as changes of erosion and sediment controls used, must be in accordance with ACT6, S-1 (6) and S-2 (7) of the General Permit.

ALL INFORMATION MUST BE COMPLETED (indicate "N/A" where not applicable)

COVERAGE RECIPIENT INFORMATION

COVERAGE RECIPIENT CONTACT NAME: Matthew King TEL # (662) 312.7889
COMPANY NAME: STK Oxbridge Group, LLC
STREET OR P.O. BOX: 518 Hummingbird Lane
CITY: Starkville STATE: MS ZIP: 39759 E-MAIL: mcooperking@gmail.com

PROJECT INFORMATION

PROJECT NAME: Woodson Ridge Subdivision, Phase 3 & 4
CITY: Oxford
ADDITIONAL ACREAGE TO BE DISTURBED: +/- 28.09 See note below TOTAL PROJECT ACREAGE: 43.47

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Signature (must be signed by coverage recipient)

Please submit this form to:

Chief, Environmental Permits Division
MS Department of Environmental Quality, Office of Pollution Control
P.O. Box 2261
Jackson, Mississippi 39225

RECEIVED
SEP 17 2019
Dept. of Environmental Quality

Additional Acreage covered by this modification include, +/-15.00 ac. for roadways in Phase 3&4 and 13.09 ac. for 57 residential lots at 10,000 sf per lot

10-14049 (2)

1. The following information was obtained from the records of the Department of the Interior, Bureau of Land Management, regarding the land owned by the United States in the State of Nevada:

5

1. The first step in the development of a new product is the identification of a market need. This is often done through market research, which can be conducted in a number of ways. One common method is to conduct surveys of potential customers, asking them about their needs and preferences. Another method is to observe how people use existing products and identify areas for improvement. A third method is to consult with experts in the field, such as scientists or engineers, who can provide insights into the latest developments in the technology. Once a market need has been identified, the next step is to develop a concept for a new product that addresses this need. This is often done through brainstorming sessions with a team of designers and engineers. The concept should be based on the market research and should take into account the needs and preferences of the target market. Once a concept has been developed, the next step is to create a prototype of the product. This is often done using 3D printing or other rapid prototyping techniques. The prototype is used to test the concept and to gather feedback from potential customers. Once the prototype has been tested and feedback has been gathered, the next step is to develop a detailed design for the product. This is often done using computer-aided design (CAD) software. The design should take into account all the requirements of the product, including its size, shape, weight, and materials. Once a detailed design has been developed, the next step is to manufacture the product. This is often done using injection molding or other manufacturing techniques. The manufactured product is then tested to ensure that it meets the requirements of the design and that it is safe and reliable for use. Finally, the product is marketed and sold to the target market. This is often done through a combination of direct sales and indirect sales, such as through retailers or distributors. The success of the product depends on how well it meets the market need and how effectively it is marketed and sold.

1. The first condition is that the system must be in a state of equilibrium. This means that the system must be at rest and not moving. If the system is moving, then the forces acting on it will not be balanced, and it will not be in equilibrium.
